Objective and investment policy

The Fund aims at a gradual capital appreciation by investing with low risk profile. Acceptance of the possibility of asset value fluctuations in the short term. It invests exclusively in monetary / bond / equity UCITS. Static cautious Balanced with mixed portfolio and currency diversification with equity investment by an average of 60% (and maximum 75%) of the total value of the fund assets. The investment horizon is medium term (5-7 years). The selection of mutual funds takes place between the major investment houses on the world stage favoring those with better credit ratings (Morningstar) and of yield (volatility, Sharpe index). It invests primarily in Europe, North America and Pacific. And it's allowed the limited investment in other markets and, residually, in Emerging Market Countries. The investment decisions for the bond component are based: 1) macroeconomic analysis of markets; 2) on the selection of the Funds that offer the best risk / return ratio. The investment decisions for the equity component selection is primarily an analytical approach to risk / return indicators on individual funds and investment style is "core" that combines "value" choices (based on fundamental assessments) and "growth" (based on growth prospects).
